CAREER PROFILE

Full-stack software engineer with deep experience across web application and microservices development, serverless and cloud architecture, identity/authentication, and developer tooling. Proven record of building and scaling user-facing products and backend services, championing test-driven development and CI/CD, and mentoring teams. Organized, innovative, and effective across distributed teams.

SKILLS

Languages: TypeScript/JavaScript, Java, Scala, Python, Go, SQL/NoSQL, HTML/CSS

Frontend: React, Next.js, Angular, Material UI, Tailwind CSS

Backend & APIs: Node.js, GraphQL, REST, Play Framework, Akka, Kafka

Data & Infra: PostgreSQL, ClickHouse, MongoDB, Redis, AWS, Terraform, Ansible, Git

AI: AI-assisted development (Claude Code, GitHub Copilot, Cursor), LLM API integration (OpenAI, Anthropic), agentic workflows, custom agent & skill development, prompt engineering

Identity: OAuth2/OIDC/SAML, OpenAM, Auth0

Practices: TDD, CI/CD, Agile, Observability, Project Management

Languages (spoken): Fluent in English and Spanish

EMPLOYMENT

Cypress.io Apr 2026 – Present

Senior Fullstack Engineer

- Build and scale full-stack features for Cypress Cloud, delivering user-facing web applications and backend services used by thousands of organizations and developers, with end-to-end ownership from ideation through release, operations, and enhancements.
- Develop highly performant web applications using React, TypeScript, and Node.js, delivering both front-end interfaces and back-end services across the product suite.
- Design and implement REST and GraphQL APIs backed by PostgreSQL, with ClickHouse (OLAP) for analytics and Redis for queueing and caching.
- Optimize performance and scale customer-facing applications to handle ever-increasing load across a fast-growing ecosystem; deploy on AWS (ECS) with Honeycomb observability.
- Practice test-driven development and continuous delivery; peer-review code and uphold high standards on production systems, including on-call ownership.
- Collaborate closely with Design, Product, Data, and Growth teams throughout the product lifecycle.
- Accelerate development with AI-assisted tooling, and author reusable AI skills and agents that enhance team performance and codify engineering best practices.

Allegion Jun 2023 – Mar 2026

Senior Software Engineer

- Designed, developed, and maintained software solutions for new and existing products using Node.js, TypeScript, JavaScript, and GraphQL.
- Architected scalable, event-based solutions with serverless technologies to deliver cost-sensitive solutions for IoT use-cases.
- Programmatically managed, observed, and monitored AWS infrastructure.
- Wrote clean, well-tested, maintainable code following TDD best practices using tools such as Jest.
- Partnered with product management to translate requirements into elegant implementations.
- Communicated, collaborated, and worked effectively with domestic and global software teams.
- Advocated and mentored best practices (TDD, monitoring, security, agile) and drove team efficiency, predictability, and velocity.

Ultimate Software / Ultimate Kronos Group Feb 2020 – Jun 2023

Principal Software Engineer

- Developed Identity applications implementing OAuth2/OIDC/SAML authentication via OpenAM and Auth0, built with Java, Go, and Angular.
- Contributed to architectural designs and planning for upcoming features.
- Built and deployed visibility and team-enablement tools to manage deployments and builds using Angular, Go, MongoDB, and Redis.
- Developed a traffic emulator with a custom circuit-breaker implementation to validate real-time loads on new environments.
- Migrated the Concourse CI pipeline orchestration engine from PCF to standalone VMs using Terraform, Ansible, and Go.
- Performed regular code reviews to maintain high standards and enabled internal teams to integrate with the application.

Norwegian Cruise Line Holdings Ltd. Sep 2017 – Jan 2020

Lead Application Developer – Architectural Lead

- Led a team of 3 developers and 1 QA in an agile environment, establishing coding standards and best practices for the team.
- Developed Scala applications/microservices for the web using Play Framework, Akka, and Angular.
- Developed and integrated multiple layers of services to export/import data across the entire NCL fleet.
- Built Kafka pipelines to handle web events.
- Owned architectural designs for new applications and services.
- Created and maintained Ansible playbooks for the provisioning/deployment of applications and services.
- Troubleshot and debugged level-2 issues within the applications.

TracFone Wireless May 2015 – Sep 2017

Associate Core Application Support – Jr. Java Admin

- Deployed Java/J2EE applications across BEA WebLogic, IBM Portal/Commerce, and Oracle SOA application servers.
- Built GUI monitoring and control tools (Java, JavaScript, AJAX, HTML/CSS) providing one-pane health checks and process control across a three-tier architecture.
- Automated code deployments (Anthill Pro, CA IT-PAM, Autosys) and troubleshot with Splunk, Introscope, and AlertSite; mentored junior team members.

Dade County Federal Credit Union Feb 2008 – May 2015

Project Coordinator

- Oversaw and coordinated projects across the credit union, ranging from ATM installations to new branch set-ups.
- Planned and evaluated project objectives and implemented productivity standards for resource allocation.
- Tested new product implementations and maintained ongoing contact with vendors and project teams.

EDUCATION

Florida International University, Miami, FL

Bachelor of Science in Computer Science (Software Development Track)
